

IEA 16th World Congress

President: Masahiko Aoki (Stanford University, USA/Japan)

July 4-8, 2011

Tsinghua University, Beijing, China

The Unifying Theme: Approaches to the Evolving World Economy

After the 2008-9 financial crisis, a refreshed search for a viable and sustainable order for the world economy has been earnestly explored in economics as well as in practice. In this search, it is increasingly recognized that the institutional form, developmental stage, and vigor of national economies are evolving in diversity, while the increasing global integration of economic activities, environmental and energy concerns, demographic dynamics, disparity of income and wealth and so on... pose common challenges. Economic inquiry into these issues and solutions may require various enriched approaches, not only traditional individual-rationality models, but also re-examination of values, comparative institutional and historical analysis, experimental and empirical studies, interdisciplinary dialogues and so on. Dynamic China would be undoubtedly a most appropriate place for economists from all over the world to gather and discuss various theoretical, empirical and policy issues from global perspectives.

Lectures/Address

- 3 Distinguished Lectures (TBA)
- Fitoussi Lecture by a distinguished host country scholar (Jinglian Wu)
- Presidential Address

Plenary Panels (organizer)

- Reforming The Global Financial Order (Joseph Stiglitz)
